Your best judgment.
Designed to support decisions that cannot wait.

The Judgment Platform for regulated enterprises

Role-specific evidence. Clear limits.
A named human makes the decision.

PRODUCT FLOW

Ingest. Twin. Operate.

One-Press Huddle
Wisdom Twins
Trust Layer

Objective: reduce avoidable decision delay without removing accountability.

Explore the demonstrations

The answer is not enough. Someone still has to own the decision.

Illustrative workflow: a bank operations team needs a policy-exception decision.

01 | ASSEMBLE

Find the evidence

Policies, prior decisions and the exception request sit across people and systems.

02 | RECONCILE

Resolve the disagreement

Operations, risk and compliance need a common record of what is known and what is missing.

03 | AUTHORIZE

Wait for the right reviewer

The decision remains open until someone with the required authority reviews it.

The initial problem to validate: waiting time between a complete request and an authorized decision.

INITIAL FOCUS

Start with one buyer and one decision.

Proposed beachhead: Toronto-based banks reviewing operational-risk policy exceptions.

Role	Proposed responsibility
Economic buyer	COO or operations leader
Control owner	CRO / operational-risk leader
Initial users	Operations analyst and named reviewer
Entry workflow	One repeatable exception-review process

A QUALIFIED START

A decision owner. Accessible evidence. A measurable baseline.

Pilot-entry gate: a named approver and permitted evidence.

Discovery scopes one workflow; the commercial validation package retains its ten-role entitlement.

Three pillars. One governed workflow.

Product design: prepare useful guidance while preserving named human decision authority.

ONE-PRESS HUDDLE

Bring perspectives together

Surface the relevant roles, evidence, disagreements and open questions in one review.

ROLE-SPECIFIC WISDOM TWINS

Make judgment accessible

Organize role-specific evidence, prior decisions and explicit limits for the task.

TRUST LAYER

Keep the decision accountable

Design for permissions, source attribution, version history, escalation and human review.

INGEST: approved evidence → TWIN: role context and limits → OPERATE: review and decide

An exception request should not become an unauthorized approval.

Illustrative acceptance fixture, separate from the five existing founder-built demonstrations.

Step	Example record
Source	Policy P-17 v3: exceptions require approval from the risk director.
Request	An operations analyst asks whether an exception may proceed.
Guidance	Cite P-17 v3, identify missing evidence and prepare a recommendation.
Control	An analyst cannot approve. Missing authority routes to the risk director.
Human release	A named approver accepts or rejects, with rationale and record version.

The fixture defines expected behavior. It is not a completed test of the live WisdomTwin product.

CURRENT STAGE

Pre-revenue. Demonstrations built. Production validation is the next step.

Five founder-built scenarios illustrate how the Judgment Platform is designed to work.

0	0	USD $0	5
production users	paying customers	product revenue	founder-built synthetic demonstrations

What the demonstrations show

The intended workflow and product experience, not customer adoption, measured ROI or production reliability.

Compete on decision quality, not on the existence of a digital twin.

Evaluate role fidelity, permission behavior and accountable human release in the same workflow.

ROLE FIDELITY

Relevant evidence

Evaluate whether the guidance reflects the right role, approved sources and current limits.

CONTROL QUALITY

Reliable escalation

Test permission denial, missing evidence, conflicting policy and handoff to the correct human.

DELIVERY ADVANTAGE

Repeatable deployment

Measure onboarding effort, integration costs and the time to an accepted workflow.

Build defensibility through permissioned evaluation data and repeatable workflows as customers adopt.

Validate the workflow. Expand after acceptance.

A staged path from a defined decision workflow to enterprise adoption.

Stage	Price (USD)	Term	Included roles
Judgment Assessment	$0	Scoping	Scope definition
Concept Validation	$50,000	2 months	10
Structured Pilot	$250,000	6 months	50
Commercial	$500,000+	Annual	500

Additional role: USD $5,000 setup plus USD $500 per month.

Source, integration, inference, hosting and support boundaries are defined for each agreement.

Earn the first repeatable use case before expanding the account universe.

Founder-led discovery, scoped validation and evidence-backed expansion.

DISCOVER

Qualify the decision

Confirm a named owner, an approved evidence source, a recurring problem and a budget route.

VALIDATE

Measure the workflow

Agree on test cases, baseline review time, acceptance criteria, integration work and paid scope.

EXPAND

Use accepted evidence

Extend roles or workflows only after customer acceptance and delivery economics are established.

Land one workflow. Prove measurable value. Expand through additional roles and decision types.

EXECUTION MILESTONES

Prove the workflow. Then prove it can be repeated.

A phased validation plan, with spending tied to evidence and customer acceptance.

MONTHS 0–3 | INSTRUMENT

Establish a baseline

Define source access, reviewer authority, held-out cases, logging and the first paid validation scope.

MONTHS 4–9 | VALIDATE

Secure customer acceptance

Measure quality, refusal, escalation and review latency. Record actual delivery cost and payment status.

MONTHS 10–18 | REPEAT

Demonstrate expansion

Repeat across independent customers and document conversion or renewal before scaling spend.

Seed-readiness gate: accepted paid use, repeatable delivery, defensible controls and observed unit economics.

TEAM

Founder-led product development. Risk and governance experience.

Product direction and enterprise sales paired with financial-services governance experience.

ROMAN BODNARCHUK

Co-Founder and CEO

Leads product direction, AI-assisted prototype building, customer discovery and founder-led enterprise sales.

STELLA CABRERA

Co-Founder | Governance

20+ years in financial services and technology. Senior Advisor at EDM Association; Chair of the Board, RMA Toronto.

Next capacity: engineering hardening, security review and pilot delivery. Stella's full-time transition remains funding-dependent.

THE ASK

USD $1,000,000 Post-money SAFE

Finance the transition from demonstrations to accepted, repeatable enterprise use.

Product engineering and controls	**USD $400K**
Founder operations and go-to-market	**USD $180K**
Evaluation and pilot delivery	**USD $140K**
Infrastructure and tools	**USD $100K**
Legal and security review	**USD $80K**
Contingency reserve	**USD $100K**

THE NEXT STEP

Review the workflow, the evidence and the validation plan.

Book a 20-minute conversation

Founder-approved planning allocation. No funds raised or verified 18-month runway is implied. No SAFE cap, discount or MFN is specified.

Show what the evidence supports.

Evidence classification for this revision. Missing test records are not proof that a feature is absent.

Capability / asset	Evidence available	Next release requirement
Five founder-built scenarios	Demonstrated with synthetic inputs	Re-run and retain versioned outputs
Pillars, role context and review UX	Represented in source deck / demos	Product-level end-to-end test record
Permissions, source attribution, escalation	Specified; production reliability unverified	Access propagation and deny-case suite
Private / on-premises / air-gapped options	Roadmap / configuration-dependent	Deployment bill of materials and tests
Customer acceptance and measured ROI	Not yet established	Signed acceptance and baseline comparison
Production-validated deployment	None in current company baseline	Customer production evidence

Runtime availability and human support coverage must be separately specified and measured. No 24/7 service-level claim.

Enforce access before guidance. Record human authorization after it.

Target control flow for implementation and testing, not a certified production architecture.

01

Identity + source access

Verify actor and allowed source set.

02

Evidence + policy

Retrieve allowed evidence; retain source and policy versions.

03

Role-specific guidance

Generate a recommendation and surface missing or conflicting facts.

04

Human release + record

Require the authorized reviewer; retain the decision and rationale.

DENY CASE Revoked source access or insufficient approval authority must prevent release and route to an authorized reviewer.

Define success before a paid validation.

Founder-approved initial test targets. Agree the held-out dataset, denominator and customer acceptance process before testing.

Measure	Proposed gate	Evidence to retain
Access-control denial	100% of specified deny tests block release	Actor, permission state, input, output and log
Human release record	100% of released test decisions have authorized approval	Approver identity, timestamp and version
Supported material claims	At least 95% on the held-out case set	Claim-by-claim source review and adjudication
Required escalation	At least 90% of escalation-required cases routed correctly	Ground-truth label and reviewer outcome
Critical unsafe release	0 in the agreed test suite	Severity rubric and complete failure review
Decision-review latency	Measure median and p95 against the customer baseline	Start/end definitions; report with quality results

Keep prices visible.
Explain the packaging before signing.

Derived from the locked E10 prices, not a new price list.

Package	Calculation	Implied included-role rate
Concept Validation	$50,000 ÷ 10 roles ÷ 2 months	$2,500 per role-month
Structured Pilot	$250,000 ÷ 50 roles ÷ 6 months	About $833 per role-month
Commercial base	$500,000 ÷ 500 roles ÷ 12 months	About $83 per role-month
Additional role	$500 × 12; plus $5,000 setup	$6,000 per role-year before setup

At the $500,000 base price, the additional-role recurring rate is 6× the included commercial role-year rate. The ratio falls at higher base prices with 500 roles; service-cost rationale remains to be validated.

Proposed scope controls: source count, connectors, inference usage, support, hosting and change requests. No unmetered or guaranteed-margin promise.

An 18-month planning envelope, not a verified runway claim.

Assume the full USD $1M is available at month 0. No revenue or additional funding is included.

Use of funds (USD)	Months 1–3	Months 4–9	Months 10–18	Total
Product engineering + controls	$45K	$150K	$205K	$400K
Founder operations + go-to-market	$30K	$60K	$90K	$180K
Evaluation + delivery	$10K	$45K	$85K	$140K
Infrastructure + tools	$10K	$30K	$60K	$100K
Legal + security review	$25K	$25K	$30K	$80K
Planned operating outflow	$120K	$310K	$470K	$900K

Closing cash: month 3, $880K | month 9, $570K | month 18, $100K contingency.

Separate opportunity, pipeline and delivery capacity.

Planning scenarios only. No account universe, conversion rate or signed contract count is presented as observed.

REVENUE SCENARIO

200 × USD $500K

USD $100M annual contract-value run rate, if 200 customers each contract at that recurring rate. Not TAM or a forecast.

FUNNEL SCENARIO

30 × 40% × 25%

Three paid validation starts, if 30 qualified discoveries convert to 12 scopes and three signed validations.

CAPACITY SCENARIO

2 parallel × 3 cycles

Six two-month validation slots over six months at full utilization, before onboarding or rework delays.

Build the real account universe from named, deduplicated organizations and verified fit. Measure actual cycle time and workload.

Funded competitors are evidence of competition, not our validation.

Primary company announcements. Descriptions are vendor claims, not independent product evaluations.

Company	Announced financing	Relevant positioning
Viven	USD $35M seed October 15, 2025	Enterprise digital twins representing individual employees and organizational context.
Twin1	USD $20M seed August 20, 2026	Digital twins with permission-aware context, governance and human control.
WisdomTwin	Raising USD $1M No financing close claimed	Proposed initial focus: accountable operational-risk exception review. Five founder-built synthetic demos.

Next competitive test: compare source quality, permission behavior, escalation, human release and implementation cost.

Useful problem context.
Not WisdomTwin performance evidence.

Historical research is isolated from the product and financial claims.

OTTER.AI / ROGELBERG | 2022

USD $80K / USD $25K

The release estimates annual meeting cost per professional employee and the portion deemed unnecessary. Voluntary summer-2022 survey: 632 employees, more than 20 industries.

BAIN / MANKINS | 2014

300,000 hours per year

At one large company, a weekly executive committee meeting generated this annual preparation burden. It was not 300,000 hours per week or a multi-company average.

WisdomTwin pilots must measure their own decision quality, review time, cost and acceptance.

A traceable revision, with one version for review.

E10.1 replaces unsupported statements in the supplied E10 text and notes. Original source files are preserved.
